

Application No.: 10/767,747
Art Unit: 3751

Attorney Docket No. 23709.00
Confirmation No. 5713

IN THE CLAIMS

Claim 1. (*Currently Amended*) A clip-on training urinal, comprising:

an a generally rectangular open container having a horizontal base and a wall extending upward from said horizontal base, said wall having an upper lip rim and including a rear wall, a first sidewall, an opposing second sidewall, and a front wall having connecting corners therebetween;

a clip extending ~~outward~~ rearwardly from said rear wall proximate said lip rim, said clip being configured to fit over the rim of a conventional toilet bowl and suspend said container downward, outside the toilet bowl;

a handle ~~attached to~~ extending laterally from said wall first sidewall proximate said lip rim, wherein said handle is spaced along said rim from said clip;

said front wall defining an opening for urination extending downward from said upper rim and ending in a lower rim;

said lower rim being spaced above said base and defining a reservoir of at least sufficient volume to contain the liquid resulting from the urination from a small boy;

whereby the small boy may urinate through said opening for urination and said container may then be grasped at said handle and lifted from the toilet bowl rim, the urine therein poured into the toilet by tilting the container so as to empty said reservoir, and said container returned to said toilet bowl rim and suspended therefrom by said clip.

Application No.: 10/767,747
Art Unit: 3751

Attorney Docket No. 23709.00
Confirmation No. 5713

Claims 2-4. (*Canceled*)

Claim 5. (*Currently Amended*) The training urinal of claim 4 1, wherein said clip is in the configuration of a downward-opening hook, said clip having an upper horizontal hook portion extending rearward from said rear wall rim and a depending hook portion connected by a bend, said depending hook portion having a lower end.

Claim 6. (*Original*) The training urinal of claim 5, wherein said clip extends from about the center of said rear wall rim, and said lower end of said depending hook portion forms a rearward bend.

Claim 7. (*Original*) The training urinal of claim 6, wherein said handle is in the configuration of a downward-opening hook, said handle having an upper horizontal hook portion extending laterally from said first wall rim and having an outer end and a generally vertical depending hook portion connected at said outer end.

Claim 8. (*Canceled*)

Application No.: 10/767,747
Art Unit: 3751

Attorney Docket No. 23709.00
Confirmation No. 5713

Claim 9. (*Currently Amended*) The training urinal of claim 8 1, wherein said urination opening extends downward from said rim, and has generally vertical sides, said sides being generally parallel to the respective corners between said front wall and said first and second sidewalls, said lower rim being in the shape of a horizontal concave curve.

Claim 10. (*Original*) The training urinal of claim 9, wherein said generally vertical sides of said urination opening are proximate said corners.

Claim 11. (*Original*) The training urinal of claim 10, wherein said walls flare upwardly and outwardly to said rim.

Claim 12. (*Currently Amended*) A clip-on training urinal, comprising:

an open container having a horizontal base and a wall extending upward from said horizontal base, said wall having an upper lip rim, said open container being generally rectangular in shape, said wall comprising a rear wall, a first sidewall, an opposing second sidewall, and a front wall having connecting corners therebetween, said opening for urination being defined by said front wall[[, said clip extending rearwardly from said rear wall.]];

a clip extending outward from said wall proximate said lip rim, said clip being configured to fit over the rim of a conventional toilet bowl and suspend said container downward, outside the toilet bowl;

Application No.: 10/767,747
Art Unit: 3751

Attorney Docket No. 23709.00
Confirmation No. 5713

a handle attached to said wall proximate said lip rim, said handle being spaced along said rim from said clip, said handle extending laterally from said first sidewall.

said wall defining an opening for urination extending downward from said upper rim and ending in a lower rim;

said lower rim being spaced above said base and defining a reservoir of at least sufficient volume to contain the liquid resulting from the urination from a small boy;

whereby the small boy may urinate through said opening for urination and said container may then be grasped at said handle and lifted from the toilet bowl rim, the urine therein poured into the toilet by tilting the container along said second sidewall so as to empty said reservoir, and said container returned to said toilet bowl rim and suspended therefrom by said clip.

Claim 13. (*Original*) The training urinal of claim 12, wherein said clip is in the configuration of a downward-opening hook, said clip having an upper horizontal hook portion extending rearward from said rear wall rim and a depending hook portion connected by a bend, said depending hook portion having a lower end.

Claim 14. (*Original*) The training urinal of claim 13, wherein said clip extends from about the center of said rear wall rim, and said lower end of said depending hook portion forms a rearward bend.

Application No.: 10/767,747
Art Unit: 3751

Attorney Docket No. 23709.00
Confirmation No. 5713

Claim 15. *(Original)* The training urinal of claim 14, wherein said handle is in the configuration of a downward-opening hook, said handle having an upper horizontal hook portion extending laterally from said first wall rim and having an outer end and a generally vertical depending hook portion connected at said outer end.

Claim 16. *(Original)* The training urinal of claim 12, wherein said urination opening is defined by said front wall.

Claim 17. *(Original)* The training urinal of claim 16, wherein said urination opening extends downward from said rim, and has generally vertical sides, said sides being generally parallel to the respective corners between said front wall and said first and second sidewalls, said lower rim being in the shape of a horizontal concave curve.

Claim 18. *(Original)* The training urinal of claim 17, wherein said generally vertical sides of said urination opening are proximate said corners.

Claim 19. *(Original)* The training urinal of claim 18, wherein said walls flare upwardly and outwardly to said rim.

Art Unit: 3751

Attorney Docket No. 23709.00
Confirmation No. 5713

Claim 20. (*Currently Amended*) A clip-on training urinal, comprising:

an open container having a horizontal base and a wall extending upward from said horizontal base, said wall having an upper lip rim, said open container being generally rectangular in shape, said wall comprising a rear wall, a first sidewall, an opposing second sidewall, and a front wall having connecting corners herebetween, said opening for urination being defined by said front wall[, said clip extending rearwardly from said rear wall.]];

a clip extending outward from said wall proximate said lip rim, said clip being configured to fit over the rim of a conventional toilet bowl and suspend said container downward, outside the toilet bowl;

a handle attached to said wall proximate said lip rim, said handle being spaced along said rim from said clip, said handle extending laterally from said first sidewall.

said front wall defining an opening for urination extending downward from said upper rim and ending in a lower rim;

said lower rim being spaced above said base and defining a reservoir of at least sufficient volume to contain the liquid resulting from the urination from a small boy;

said urination opening having generally vertical sides, said sides being generally parallel to the respective corners between said front wall and said first and second sidewalls, said lower rim being in the shape of a horizontal concave curve;

said generally vertical sides of said urination opening being proximate said corners.
